CONSTRUCTION TAKEN CARE OF

A TOTAL
CONSTRUCTION
SOLUTION

TPS Construction brings total project management to its existing and growing client base. Whether you're planning to upgrade, extend or change the use of your facility - or even planning to build a new purpose-built HQ for your business - TPS construction will be able to manage all of your construction requirements from conception to completion. Our project management and construction team, together with our subcontract network, has a track record for delivering high quality projects on time and to budget.

Our dedicated construction team is experienced in working direct with the client or as a partnered builder with some of the biggest construction names in the country.

The TPS Construction team was developed in response to client requests for a single point of contact on projects the group was already involved with. Having wide experience in demanding environments, TPS understands completely the needs of clients, and was already using rigorous project planning procedures to advance its own workload.

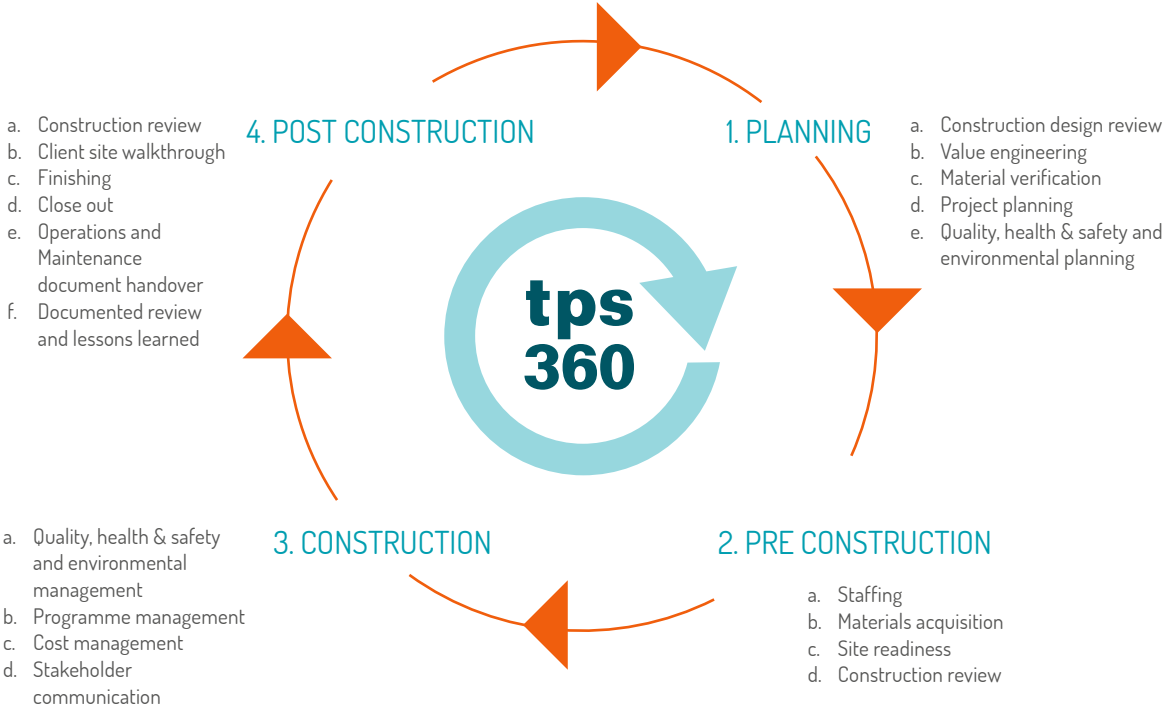

By bringing construction expertise into the group we have successfully developed a reputation as a main contractor, managing sub-contractors and specialist trades to deliver multidiscipline construction projects with excellent results.

Our management of safety is second to none and you can have confidence that construction risks are managed in the most effective way to protect you, your employees and your investment.

- Civil Engineering • Educational Establishments • Maintenance Projects • Office Refurbishments
- Warehouse and Factory Upgrades • Factory Extensions • New Build Projects

The TPS Construction approach

At TPS360, the Health & Safety of our staff, our clients' staff and the general public runs through the core of our project management processes and is embedded in our culture. Safety is at the forefront of our process during planning, pre-construction, construction and post construction phases of our work and it is just as important in every phase to ensure we are always learning and improving to achieve excellence in safety. During the construction phase of works we undertake safety reviews, audits, tool box talks and campaigns involving all stakeholders.
